Product: Aperio Platform

Subject: Essentials Software Release 4.1.9

Note: To download these releases visit our website at <http://brtint.com/downloads.html>

Essentials Release 4.1.9:

This is a standalone Essentials release. Though it will work with any firmware, it will display the most information when it can take advantage of features built into the latest Firmware release, 4.1.0. It contains logging and self-diagnostic improvements to allow Blue Ridge Technologies Tech Support to better assist customers.

Bug Fixes:

-Fixed a regression introduced between 4.1.5 to 4.1.8 that prevented a Station Preset button from being added as a channel input. This affected only adding while authoring not the loading of existing of extant System Files using a Station Presets as inputs nor the retrieval of same from a remote system.

-Augments the help section for Channel Daylight Harvesting to better reflect the new labels for Open Loop Harvesting beginning with Essentials 4.1.5.
