Essentials™ Release 4.2.7:

This release is meant to accompany the latest Firmware release: 4.2.5. Though it will work with any firmware, it will display the most information when it can take advantage of features built into the latest Firmware release.

Feature Additions: (Since the last Essentials™ release, 4.2.5)

- Essentials has gained the ability selectively show or hide the Default Action of Relay Outputs. This option is available in the Tools menu and is unchecked (i.e. hide) by default.

- ZCDEs may now accept Rx224s as I/O Modules.

- Essentials now accurately displays only the applicable Channel sequence subsections, when the only UI offerings are remote global inputs, even as that remote lineup undergoes changes. This was an issue in authoring those rare systems where there are *only* remote globals of a specific UI type available, and the host controller had no local UIs to contribute to its Channels.
